PROJECTS

Event Ticket Booking System

As part of my university assignment, I successfully designed and developed a Event Booking System - In here I am using Reactjs with state management.

OH! Ride mobile application

As a Mobile Front-End Developer for Oh Ride Travel, I designed and developed the UI using React Native, ensuring a seamless and user-friendly experience. I integrated Redux for state management, and implemented key features such as real-time notifications, chat functionality, and confirmation sections to enhance user interaction and engagement.

OH! Ride admin panel

Web application developed using ReactJs, tailwind CSS and spring boot for administrative management of OH! ride application data.

Mave Chat Application

Utilize Tailwind CSS for styling and WebSocket for real-time communication. I am responsible for designing and implementing an intuitive UI, ensuring smooth user interactions, and optimizing the chat functionality for a seamless experience.

Nursing Wordpress Site

<https://srilankanurses.com/>

Using WordPress and Elementor Pro, designing a responsive and visually appealing layout. I customized the site's structure and functionality, ensuring optimal performance and user experience. By leveraging Elementor Pro's advanced features, I was able to create dynamic and engaging pages tailored to the client's needs.
